

How to switch SIM-card in your mobile phone

Turn off your phone. Open the tray where the sim-card is with the small needle that came with your phone (if you don't have a needle you can use a small clip). On Samsung Galaxy A40 and Huawei P20 Lite the tray is located on the long side to the left of the screen.

Check out what size it is on the current sim-card and how it is placed. Remove the new sim-card with the right size and place it in the slot where the old sim-card was.

Push the tray back in and turn on your phone. It will now ask for the pin-code to the sim-card.

You find the code on the back of the plastic card that held the sim-card.

Enter the 4-digit code and press OK. Your phone is now ready to use.
